

# Garment Care Guide

## General Tips

All our RS products are made with technical fabrics and therefore are best washed in cold water with a mild detergent.

Technical fabrics are quick drying and shouldn't be placed in the tumble dryer. Hang your items in a well ventilated space, or better still outside, and they will be dry in no time.

We recommend you hand rinse your RS products in cold water on their first wash.

Always wash dark and white products separately.

Don't let velcro come into contact with your technical fabrics as this will cause pilling. For none RS items, please follow the care labels in the garment.
